### A few words about the map:

The original MTBO map was surveyed in April-August 2008 based on a foot-o map thanks to Péter Molnár. The map was completely resurveyed in May-July 2018.

In parts of the map the roads are very fast, based on hard soil, not sensitive to rain. At places it is stony. In other parts recent rains resulted in dense undervegetation and swampy areas. Mud is not typical, but in case of sudden rain Parts of the terrain is actively worked by the forestry. Heavy machinery cuts horrible tracks every day, sometimes every hour. These were continuously re-mapped as much as possible, but new ones may appear at any moment. Courses will avoid these areas as much as possible, but it is mission impossible.

Other parts of the forest are under strict protection. Off-track riding is therefore strictly forbidden during the competition. The terrain is also actively used for hunting with mobile shooting platforms that may change location, including one that was set up in the middle of a road.

Intense spring rains resulted in dense undervegetation. Storms resulted in many fallen branches. The roads most affected by stinging nettle are shown as dotted with green stripes over them. Green stripes over roads mean man eating nettles with no exception.

The area also features a healthy population of ticks. Please check yourself after the competitions!

**Special map symbols:**

**Straight cut overgrown**

**Track with nettles**

**Forest straight cut clean**

**Strong undervegetation in clear forest**

**Have a great competition!**
